

Remote FAT

Simply a smart, sustainable approach to perform your Factory Acceptance Test

To support our customers we use remote FAT as an alternative approach to performing Factory Acceptance Tests.

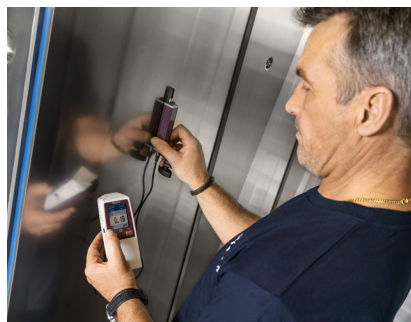

Complementary to our physical Factory Acceptance Tests, we offer remote FAT to continue to support you even in times of (travel) restrictions.

Using advanced information technologies, like video conferences to stay connected and cloud services for secured file sharing and storing, your project can continue according to protocol and project specifications.

Our commitment goes far beyond supplying equipment, we make sure your projects are supported from start to finish.

We offer several levels of remote FAT

- Standard remote FAT
- Premium remote FAT
- Advanced remote FAT
- Custom remote FAT

How it works

Our dedicated Quality Assurance testers and Project Managers guide and support you through the whole process to secure a safe and confident execution of the Factory Acceptance Test, regardless of being on site or working remotely. Together with our team, frequent meetings are held to keep close contact and interaction throughout the performance.

ACTIONS

2–4 weeks prior to FAT

FAT Protocols shared

1 week prior to FAT

Agreement on FAT

Start of first FAT day

Kick-off meeting

FAT

FAT execution day,
wrap up meeting

Final FAT day

Final wrap up meeting

DELIVERABLES

FAT protocols

Accepted FAT protocols, turn over package and agenda

FAT agenda.
Live stream on the product

FAT results

Closure of FAT by signing off FAT
